

SHXC COIN

Official Whitepaper

One Ecosystem. Multiple Blockchains.

Payments • Rewards • Commerce • Circular Technology

Version 1.0

October 2026

Official Launch: 1 October 2026

S.H Holding Group

Document Status

- Token name: SHXC Coin
- Symbol: SHXC
- Project / Group: S.H Holding Group
- Founder: Mohamed Elnakhal
- Official launch date: 1 October 2026
- Official website: <https://shshops.com/shxccoin>
- Official email: info@shshops.com
- Whitepaper version: 1.0 (October 2026)

Executive Summary

SHXC Coin (SHXC) is the multichain utility token of the S.H SmartHub ecosystem. It is designed to connect digital commerce, electronics repair, customer rewards and circular-technology workflows across S.H SmartHub, S.H Shops and RepairX. The official launch date is 1 October 2026.

SHXC is deployed independently on multiple blockchain networks. A shared name and ecosystem identity do not by themselves make network-specific deployments bridged, fungible across chains, or economically interchangeable. Users must verify the exact network and official contract, mint or asset identifier before interacting with SHXC.

Ecosystem Context

S.H Holding Group operates an electronics and technology ecosystem spanning commerce, repair, refurbishment and circular-electronics workflows. S.H Shops provides digital commerce capabilities, while RepairX supports an end-to-end repair and circular-electronics process that can include collection, diagnosis, quotation, pickup, repair or refurbishment, payment and tracking, and classification of total-loss devices for parts recovery or e-waste handling.

SHXC provides a common utility layer intended to connect these operational surfaces with blockchain-based payment and reward functionality.

Purpose and Utility

SHXC is intended for practical ecosystem use rather than as a promise of financial return. Current and intended utility areas include crypto-enabled commerce, payment settlement, ecosystem rewards, customer engagement, RepairX-related transactions and incentives, and integrations across S.H SmartHub digital services.

The S.H SmartHub crypto-payment stack supports SHXC as the ecosystem token. The administrative commerce rate currently configured for supported S.H payment workflows is 1 SHXC = USD 0.000001. This is an internal commerce-rate setting. It is not a guarantee, redemption promise, market-price peg or representation of the price available on any decentralized or centralized market.

Multichain Architecture

SHXC uses a multichain deployment model. Each deployment is a network-specific asset governed by the technical rules, contract standard and infrastructure of its host network. Some deployments use the standard 100 billion unit model, while other networks use different supplies because of network or launch-platform constraints.

There is no assumption in this whitepaper that every SHXC deployment is automatically bridged. Cross-chain transfers should only be treated as valid where an official bridge or explicitly supported transfer mechanism is published by the project. The official registry, not the ticker symbol alone, is the primary identity reference.

Tokenomics and Allocation

For standard 100 billion SHXC deployments, the project model is 70% Market & Liquidity and 30% Project Treasury.

Market & Liquidity: 70,000,000,000 SHXC (70%).

Project Treasury: 30,000,000,000 SHXC (30%).

Standard deployment supply: 100,000,000,000 SHXC (100%).

This 70/30 model describes the standard deployment framework. Network-specific deployments with a different total supply must be read according to their own published supply and on-chain state. Allocation labels should not be interpreted as a claim that every unit is circulating, liquid, locked, vested or available for sale at any given time.

Supply Transparency

Because SHXC exists as independent network-specific deployments, the supply of one network must not be presented as the global circulating supply of the ecosystem. The arithmetic sum of published network supplies is a transparency aggregate only and does not establish economic equivalence, bridging, liquidity or circulation.

Circulating supply, liquidity and treasury balances are dynamic on-chain facts and should be measured per network. The project will use the official registry and explorer data to keep network identities and published supply information distinguishable.

Official Multichain Registry

The following registry records the official SHXC network-specific identifiers supplied by the project. Always verify the full identifier and network before interacting with a token.

Network	Official Identifier	Supply
Ethereum	0x730a976db4f3B8179aAF7E5E3c54CD5ecBc81B07	100B

Commerce and Payment Architecture

SHXC is integrated into the S.H SmartHub commerce-payment architecture, including WooCommerce-based payment workflows. Payment confirmation logic is designed to match network, asset, recipient, amount and transaction evidence before completing an order. Where settlement evidence is absent or inconsistent, orders should remain pending or on hold rather than being automatically fulfilled.

The ecosystem also supports other independent payment assets. Their inclusion does not change SHXC's status as the sole current S.H ecosystem token. The discontinued SHX token must not be confused with SHXC.

RepairX and Circular Electronics

RepairX is positioned as a digital circular-electronics workflow rather than only a repair-booking interface. Its operating model can coordinate collection of defective electronics, diagnosis, quotation, pickup, repair, refurbishment, payment and tracking. Where a device is economically beyond repair, workflows may support purchase, parts recovery or e-waste classification.

SHXC can support payments, rewards and engagement within these workflows as integrations are made available. Utility statements should always be read together with the live functionality published on official S.H channels.

Security and Verification

Users should never identify SHXC by symbol alone. Token symbols are not unique and can be copied by third parties. Before any transfer, swap, payment or wallet import, users should verify the network and the complete official contract, mint or asset identifier against the official S.H registry.

Private keys and seed phrases must never be shared with S.H representatives, support personnel, websites or social accounts. Blockchain transactions can be irreversible. Smart-contract, network, wallet, bridge, liquidity and market risks remain the responsibility of users interacting with public blockchain infrastructure.

Legacy SHX

SHX is a discontinued legacy token and is not the current ecosystem token. SHXC Coin is the sole current S.H ecosystem token. Legacy SHX contracts or historical market references must not be represented as SHXC.

No automatic migration, redemption or exchange from legacy SHX to SHXC should be assumed unless an official mechanism is explicitly published by S.H Holding Group.

Organization and Founder

Project / Group: S.H Holding Group

Founder: Mohamed Elnakhal

Official launch date: 1 October 2026

Official project email: info@shshops.com

Official SHXC page: <https://shshops.com/shxccoin>

Roadmap and Distribution

The SHXC rollout is organized around five operating layers: foundation and verification; market infrastructure; distribution; ecosystem growth; and broader market-data and directory visibility.

Current priorities include maintaining the official multichain registry, explorer metadata, wallet and token metadata, GitHub documentation, Base/Farcaster distribution, market-data discovery, and later applications to major token directories where eligibility and live-market requirements are satisfied. Roadmap items are objectives, not guarantees of acceptance by third-party platforms.

Risk and Legal Notice

This whitepaper is an informational description of the SHXC ecosystem and its technical and commercial utility. It is not investment advice, a prospectus, an offer of securities, a guarantee of liquidity, a promise of profit, or a commitment that SHXC will maintain any particular market value.

Digital assets involve material risks, including smart-contract failure, network congestion or outages, wallet compromise, regulatory change, liquidity limitations, price volatility, third-party platform failure and irreversible user error. Availability of SHXC or an ecosystem service may differ by jurisdiction and network. Users are responsible for complying with laws applicable to them and for independently evaluating technical and financial risks.
